PROJECTS

Learning-Driven Autoscaling System for Cloud Computing
Python, Machine Learning, Flask

- Developed an intelligent autoscaling system to dynamically scale cloud resources (Scale Up, Scale Down, Stable) based on workload prediction.
- Implemented machine learning models to analyze CPU usage, traffic patterns, and system load for accurate scaling decisions.
- Built a real-time prediction module to classify system states and trigger automated scaling actions.
- Integrated REST APIs using Flask for communication between prediction model and cloud environment.
- Improved resource utilization and reduced operational cost by optimizing scaling decisions.
